simply garden small! End hunger, restore health with creative micronutrient-rich food-growing strategies from around the world. Yvonne Scott

In a world of plenty why is there hunger? And why is the so-called “humanitarian aide system” of giving food commodities to hungry people not ending the crisis of malnutrition? These questions have puzzled activist, writer, one-time small farmer and community garden mentor and instructor, Yvonne Scott, for a very long time and connected her with some very creative answers. As a staunch believer that hunger is unacceptable, Scott shares with us what she calls “food growing strategies” combining simple growing methods and containers from available materials with the best foods to reverse “hidden hunger” or micronutrient depletion. “Anyone can garden,” she says, “anywhere,” and this book will provide the reader with colorful examples--whether you live in South Africa, a flood zone, or the middle of Kansas. Be prepared to be dazzled as you encounter some of the easiest, cheapest, most practical, space-saving and functional garden ideas from around the world. A key component of this book is information on why hunger exists, the two types of hunger, an understanding of micronutrient deficiency and how to bring critical micronutrients back into the diet. Also included are simple fertilizers, a no-turning compost system, ideas for saving seeds, recipes and much more. This manual could become an important tool in the anti-hunger toolbox for teachers, health care workers, community activists, Peace Corps or Americorps volunteers, or anyone working with food-insecure populations or anyone interested in regaining control over their food sources and improving their diet.
