What would you do if you thought you were being bugged? How would you defend yourself? How would you even know about it? If you've pondered these questions, and especially if you haven't, you need to read this book. It was written to tell you, the average Joe, everything there is to know about tiny hidden transmitters that can broadcast your personal and business conversations to spies, government agents . . . even the next-door neighbors. Find out how these devices work, how effective they are, how to find them and deal with them and how to use this technology in your own self-defense if necessary. Includes scores of ideas and resources for protecting the privacy of landline, cellular and cordless telephones, as well as pagers, fax machines and computers, plus phone phreaking terms and tricks and, as one reviewer put it, true tales of the Biz that "will spook you . . . and a few that will make you laugh."
