## **On the Origin of Allopatric Primate Species and the Principle of Metachromic Bleaching: Discrimination of Deviant Adolescent Males Driving Allopatric Speciation in Territorial Social Primates** Dr Marc G.M. van Roosmalen, Dr Tomas van Roosmalen

Here we present a theory on the origin of allopatric primate species that follows - at least in Neotropical primates - the irreversible trend to albinotic skin and coat color, called “metachromic bleaching”. It explains why primates constitute such an exceptionally diverse, species-rich, and colorful Order in the Class Mammalia. The theory is in tune with the principle of evolutionary change in tegumentary colors called “metachromism”, a hypothesis propounded by the late Philip Hershkovitz. Metachromism holds the evolutionary change in hair, skin, and eye melanins following an orderly and irreversible sequence that ends in loss of pigment becoming albinotic, cream to silvery or white. In about all extant sociable Neotropical monkeys we identified an irreversible trend according to which metachromic varieties depart from the saturated eumelanin (agouti, black or blackish brown) archetypic form and then speciate into allopatric taxa following the trend to albinotic skin and coat color. Speciation goes either along the eumelanin pathway (from gray to silvery to cream to white), or the pheomelanin pathway (from red to orange to yellow to white), or a combination of the two. The theory represents a new evolutionary concept that seems to act indefinitely in a non-adaptive way in the population dynamics of male-hierarchic societies of all sociable primates that act territorial. We have tested the theory in all 17 extant Neotropical monkey genera. Our theory suggests the trend to allopatry among metachromic varieties in a social group or population to be the principal behavioral factor that empowers metachromic processes in sociable Neotropical monkeys. It may well represent the principal mechanism behind speciation, radiation, niche separation, and phylogeography in all sociable primates that hold male-defended territories. We urge field biologists who study primate distributions, demography and phylogeography in the Old World to take our theory to the test in the equally colorful Catarrhini.

**From reader reviews:**

**Lucille Renner:**

What do you concerning book? It is not important along? Or just adding material when you need something to explain what the ones you have problem? How about your free time? Or are you busy man or woman? If you don't have spare time to accomplish others business, it is give you a sense of feeling bored faster. And you have extra time? What did you do? Every individual has many questions above. The doctor has to answer that question simply because just their can do that. It said that about e-book. Book is familiar on every person. Yes, it is suitable. Because start from on pre-school until university need this kind of On the Origin of Allopatric Primate Species and the Principle of Metachromic Bleaching: Discrimination of Deviant Adolescent Males Driving Allopatric Speciation in Territorial Social Primates to read.

**Gary Morrell:**

On the Origin of Allopatric Primate Species and the Principle of Metachromic Bleaching: Discrimination of Deviant Adolescent Males Driving Allopatric Speciation in Territorial Social Primates can be one of your starter books that are good idea. We all recommend that straight away because this book has good vocabulary which could increase your knowledge in vocab, easy to understand, bit entertaining but nonetheless delivering the information. The author giving his/her effort to put every word into enjoyment arrangement in writing On the Origin of Allopatric Primate Species and the Principle of Metachromic Bleaching: Discrimination of Deviant Adolescent Males Driving Allopatric Speciation in Territorial Social Primates yet doesn't forget the main place, giving the reader the hottest and based confirm resource data that maybe you can be certainly one of it. This great information may drawn you into brand-new stage of crucial thinking.

**Salina Rodriguez:**

In this age globalization it is important to someone to acquire information. The information will make someone to understand the condition of the world. The health of the world makes the information quicker to share. You can find a lot of recommendations to get information example: internet, newspapers, book, and soon. You can view that now, a lot of publisher that print many kinds of book. The book that recommended for your requirements is On the Origin of Allopatric Primate Species and the Principle of Metachromic Bleaching: Discrimination of Deviant Adolescent Males Driving Allopatric Speciation in Territorial Social Primates this reserve consist a lot of the information on the condition of this world now. This kind of book was represented how do the world has grown up. The terminology styles that writer use to explain it is easy to understand. The writer made some analysis when he makes this book. That is why this book suitable all of you.

**Donald Lee:**

Reserve is one of source of expertise. We can add our expertise from it. Not only for students but native or citizen want book to know the update information of year to year. As we know those ebooks have many advantages. Beside all of us add our knowledge, also can bring us to around the world. Through the book *On the Origin of Allopatric Primate Species and the Principle of Metachromic Bleaching: Discrimination of Deviant Adolescent Males Driving Allopatric Speciation in Territorial Social Primates* we can get more advantage. Don't that you be creative people? For being creative person must love to read a book. Just simply choose the best book that suitable with your aim. Don't become doubt to change your life by this book *On the Origin of Allopatric Primate Species and the Principle of Metachromic Bleaching: Discrimination of Deviant Adolescent Males Driving Allopatric Speciation in Territorial Social Primates*. You can more attractive than now.
