Excerpt from Clinical Hematology: A Practical Guide to the Examination of the Blood With Reference to Diagnosis

Three noteworthy lines of advance have developed from recent work in hematology: the identification of new clinical entities, the correlation of blood pictures with a number of diseases hitherto unstudied or imperfectly investigated hematologically, and the proof of the septic nature of many of the specific infections. The first has established upon a clinical basis trypanosomiasis, kala-azar, spotted (Montana) fever, and cyanotic polycythemia; the second has shown in detail the blood changes incident to chloroma, hydatid infection, multiple periostitis, pancreatitis, variola, arthritis deformans, sprue, leukanemia, burns, and x-ray therapy; and the last has proved the bacteriemic character of enteric fever, Malta fever, pneumonia, scarlet fever, and, possibly, rheumatic fever. Progress of great practical value has been made in the technic of blood examinations, notably in staining methods, in serum diagnosis, and in blood culturing. These advances, all made during the past two years, have been incorporated in this edition, together with much other new material, gleaned by the consultation of more than nine hundred late references to hematological literature.

The original data of the book are based upon the records of about ten thousand blood examinations, made chiefly at the German, the Jefferson, and the Philadelphia General Hospitals. This new matter relates more especially to the primary anemias, malignant disease, cholelithiasis, icterus, pancreatitis, gastric ulcer, pneumonia, septicemia, and suppurative lesions. For the sake of clearness, tabulations have been avoided as far as possible, and the data analyzed and presented as summaries. Among the improvements in technic described are Wright's stain, Milian's method of estimating the coagulation time, Reudiger's serum test, medico-legal tests for blood, and cryoscopy. A brief account is given of Ehrlich's side-chain theory and its relation to immunity and to hemolysis. The detailed revision of the text has been supplemented by the addition of a new colored plate and numerous other illustrations.
